Summary

Lately, I've been spending a lot of time figuring out how much I can get AI agents to do for themselves. That includes building the tools that review their code, spin up test environments, and send them back to fix things. I've mostly developed in TypeScript, currently using Vite, TanStack, and React, with AWS wrapped in Amplify Gen 2. AI has given me a reason to wander much further than that, and my home server has been getting a workout.

I'm also the lead developer on SurveyScope. We've built it into a platform that takes aerial wildlife surveys through annotation, quality checks, and population estimates, and I'm proud of how far it's come. I studied BSc IT at North-West University and graduated cum laude.

Featured Project

- **SurveyScope**
 - WildEye Conservation's platform for processing aerial survey imagery and estimating wildlife populations with the help of AI models
 - Built on TypeScript, Vite, TanStack, React, and Python, with AWS wrapped in Amplify Gen 2
 - There's quite a bit in it now:
 - Model-guided annotation workflows
 - A false-negative review workflow to find animals the models missed
 - Quality control workflows and user testing
 - Automatic and manual homography creation
 - Chain linking to identify the same animal across overlapping images and avoid counting it twice
 - Jolly II result generation and analysis
 - These days I'm spending a lot of time making it faster and nicer to use, which sometimes means rebuilding things I've already built
 - Live site | Source on GitHub

Current Focus

My current setup is mainly T3 Code with a variety of AI subscriptions, because I'm insane. I've never been this motivated to mess with how I work. Some of what I've been putting together:

- AI review tools that check every commit
- Local test environments spun up with Docker and QEMU so agents can test their own work
- Agents that only report back once they've made it through the review and test loops
- Local models, Hermes Agent, bots, and review and testing services running on my home server over Tailscale

Experience

- **WildEye Conservation** - Lead Developer (June 2026 – present)
 - Continued as lead developer on SurveyScope after moving to WildEye full time
 - Development with TypeScript, Vite, TanStack, React, Python, and AWS through Amplify Gen 2
 - Built and use my own AI code review and testing tools to check changes before release
- **Innoventix Consulting** - Software Developer (November 2024 – May 2026)
 - Lead developer on SurveyScope in collaboration with WildEye Conservation
 - Full-stack development across React, Next.js, TypeScript, Python, and AWS
- **Freelance Web Development** - Web Developer (2024)
 - Built and maintained client websites on Shopify and custom stacks
 - Worked primarily with TypeScript, React, and Next.js
- **North-West University (NWU)** - BSc. IT Student (2022 – 2024)

Education

- **North-West University (NWU)**
 - Bachelor of Science in Information Technology (BSc. IT), Cum Laude
- **Noordheuwel High School**
 - Matric - five distinctions

Certifications

- National Senior Certificate
- Bachelor of Science in Information Technology (BSc. IT), Cum Laude

Skills

- **Current development stack:** TypeScript, Vite, TanStack, React, Python, AWS through Amplify Gen 2
- **AI, review & automation:** T3 Code, coding agents, automated code review and test loops, local models, Docker, QEMU, Tailscale

Dabbled with over the years

- **Projects and freelance work:** Next.js, JavaScript, Convex, PostgreSQL, Supabase, Tailwind CSS, shadcn/ui, Zod, Resend, Expo, WordPress, Shopify
- **Academically:** C#, Java, C++, SQL Server, Oracle, Access, ASP.NET, WinForms .NET

Projects

- SurveyScope - Wildlife census platform for annotating aerial imagery and estimating animal populations.
- EFT Toolset - A Tarkov companion I built and use while playing, for quick item, quest, and trader lookups using TARKOV.DEV data.
- WebDevEwan - My Next.js portfolio, where I tell my story as a fantasy mage's chronicle.
- Teaching & Learning System - A university group project we built so lecturers could review student videos and leave feedback on web and mobile.
